

SI for self adhesive labels

Product Overview

General Properties

With benchmark product resistance capabilities, good overprinting characteristics with many commonly used inks and varnishes, combined with high heat resistance and brightness, SI is the industry standard foil for rotary self-adhesive label applications. It is also extremely versatile across most substrates offering good fine detail and medium area coverage.

Main Applications

- Suitable for most types of inks, varnishes and coatings, typically UV, conventional and water-based
- Coated and uncoated paper and board
- Polyethylene and Polypropylene as well as uncoated papers
- Some filmic materials, laminates, etc.

Key Features

S Release/lacquer provides a medium release characteristic, over-printable with good rub resistance in graphics applications.

The I adhesive has integrated tie coat properties which give SI excellent product resistance for personal care and cosmetic label applications.

Foiling characteristics range from clean fine detail to medium area coverage.
